### About Me

- **Working in IT is my dream.** I have been interested in programming since school, but it was decided to enroll in the Faculty of Economics.
- After university, I went to work for an insurance company.
- During those 2 years in the insurance company **I gained** a lot of experience, for example: **working in stressful situations, communicating with clients, working in a team, searching and analyzing a large amount of data, and much more.** But I realized that it wasn't mine.
- I decided to start my journey with front-end development.
- I am constantly striving for self-study. I'm quick-learning, ambitious and highly motivated person. **I approach the tasks assigned to me responsibly and with enthusiasm.** I like to look for new ways to solve the same problem.
